

INSTALLATION INSTRUCTIONS

Using the Complete Dishwasher Cover Plate is simple and gives the job a professional finish.

*Note: Check the hose on the dishwasher you are about to install.
Will the hose and connections fit through a 57mm hole?*

FOR USE WITH A SINGLE 57MM HOLE

- 1 Drill the hole and bring the hoses and lead through the bottom section of the plate
- 2 Connect dishwasher hoses and power lead to tap, trap and power point
- 3 Position the plate so that the hoses and lead will fit into the moulded holes and the screw holes are over the chipboard
- 4 Drop the top plate over the bottom section, locking the hoses/lead in position
- 5 Put a screw through the fixing holes to lock the cover plate in position
- 6 Seal the holes with silicone if required

FOR USE WITH TWO 57MM HOLES

To allow for larger solenoids to pass through the cover plate, drill **two** 57mm holes so that the centres of each hole is 36mm apart.

Then follow steps 2 - 6 as above
